- Drainage channels
- Laying kerbs
- Concrete pads
- Soakaway systems
- Laying tarmac
- Play areas & surfaces
- Drain cover repair
- Repair bridges/roads

Kerb laying

Drainage channels

**DALROD's Civils & Construction Division designs, implements and maintains all above groundworks in addition to supplying a full drainage service.**

The new division will encompass all of DALROD's current full drainage service and in addition will design and maintain above groundworks such as laying kerbs and concrete pads, installing ACCO drainage channels, repairing damaged drain hole covers and installing the new plastic crated soakaway systems.

### All types of civils work

The division will maintain environmental works on roads, bridges, canals and buildings, lay tarmac, concrete, Braedon gravel roadways and also lay soft play surfaces for parks and play areas. Local authorities and playground companies have been using DALROD's Civils & Construction team to install, maintain and repair public open space areas throughout the UK and DALROD can now undertake any type of civils work that is requested.

## Quality service & value whatever the location

DALROD continues to expand across the UK with service depots in locations ranging from Newcastle to Essex and from the Wirral in the North West to Ipswich on the East Anglian coast. As a company, we are dedicated to offering the same high levels of quality service and value no matter what the location.

## Accreditations mean peace of mind

DALROD's many accreditations give our customers peace of mind and confidence in our company. All employees undergo extensive in-house training and attend numerous professional training courses prior to going out on site alone. The work carried out by our fully trained, quick response team is fully guaranteed. Our main objective is to give our customers confidence in the operation of this company and the service it provides.
